

## **ABSTRACT**

This report briefly describes about the seventh semester project proposal on an e-commerce website, “E-Mart”. Over the past decade, e-commerce has transformed the way the business is being done in the developed world. But in Nepal, it is still in its infancy. Therefore, we propose this project with the intention of building a domestic e-commerce website suitable for Nepali community. The main goal of this project is providing consumer-to-consumer and business-to-consumer sales services via the Internet. It would be the platform where the seller can advertise their products and the buyer can purchase their product of interest directly from the seller. The selling party would need to provide insertion fee while uploading the product for advertisement. This website doesn’t perform any kind of transaction of goods but is the platform where people or business originations can buy and sell any kind of goods with each other.

**Keywords:** *E-commerce, virtual market, transaction.*
